

PHR Overview

SchoolCare's Personal Health Record app allows parents to access their children's health information from anywhere at any time. Parents will also receive nurse alerts (push notifications) when their child visits the school nurse's office.

Recent Visits

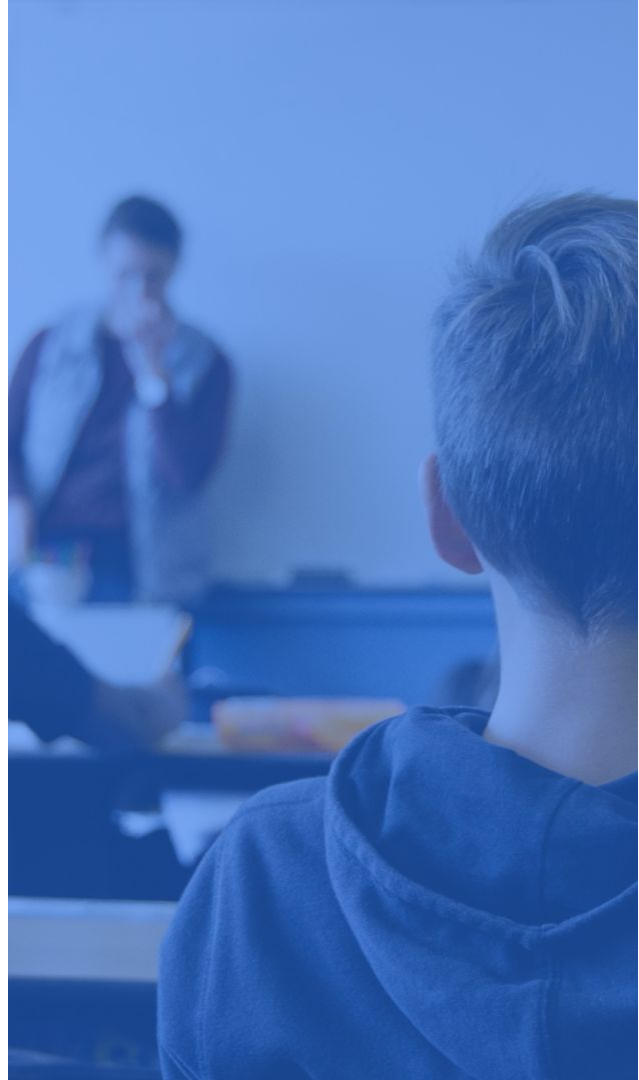

See the last 30 days of your child's medical events at school

Student Health Information

Review your child's health information, including immunizations, full visit history, and emergency contacts

Real-Time Notifications

Receive notifications from your child's school health office and stay aware of health programs to benefit your child

How to send a notification

Schools have the power to decide what remains public or private, and when a parent is notified through the app.

Step 1: Decide whether a visit is public or private. Click “No” to this record being private, and give parents access to see this individual visit.

Private Record?

Yes No

② Private episodes are visible only to medical staff

Note: If a parent created an account with SchoolCare, they can log in to view this information either online or through the app if the record is not private.

Step 2: To send an instant notification to a parent through the PHR app, toggle “Yes” to send a push notification.

Referral to Provider

Yes No

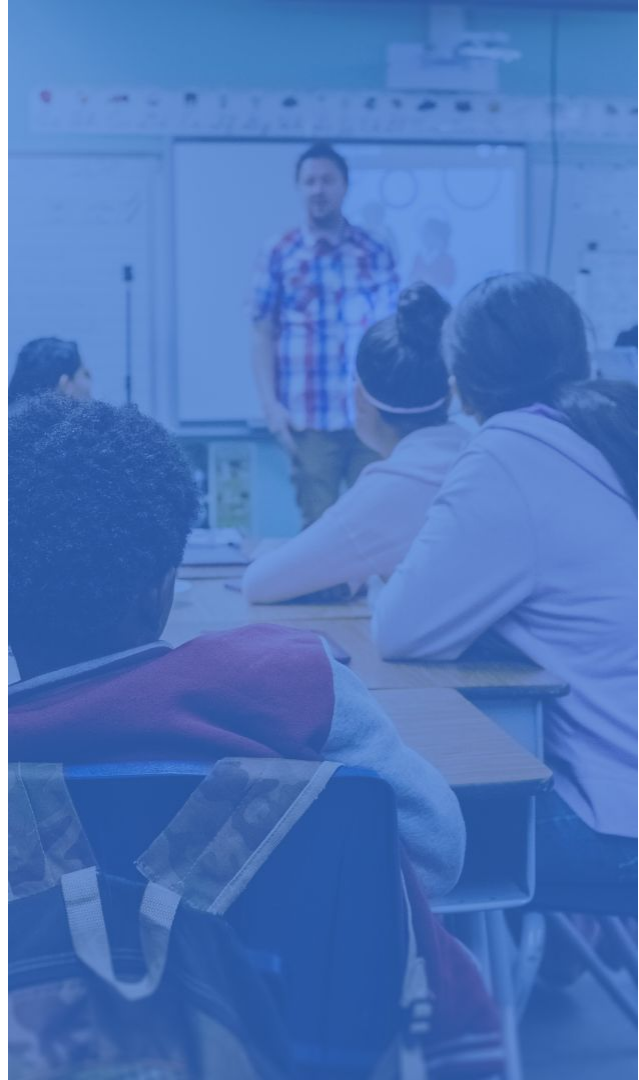

Immediately Email Parent/Guardian

Yes No

Send Push Notification

Yes No

It's as simple as that!

WHAT PARENTS WILL SEE ON THE APP

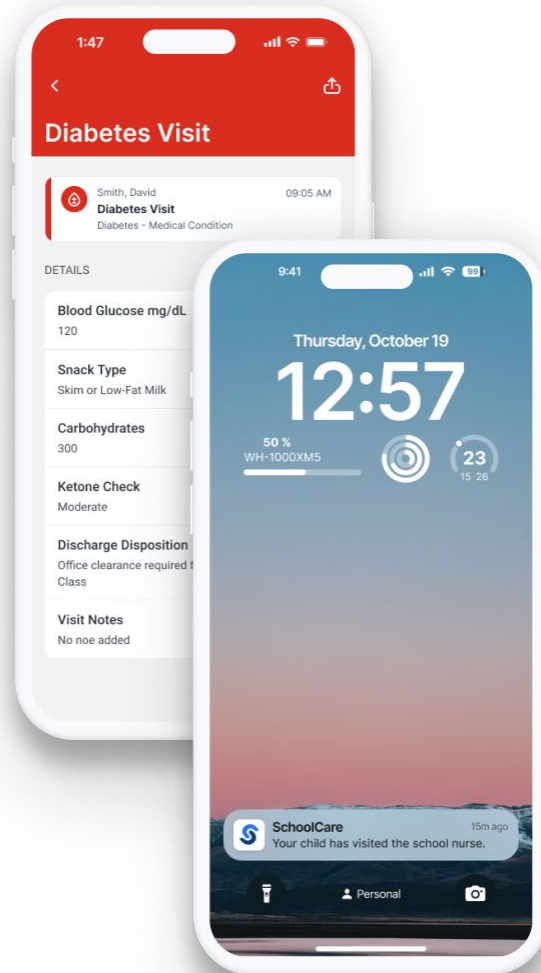

Parent View

When a nurse makes a visit public and sends a push notification:

- The parent of the student will receive the notification directly on their phone as long as they have signed up in SchoolCare and downloaded the app.

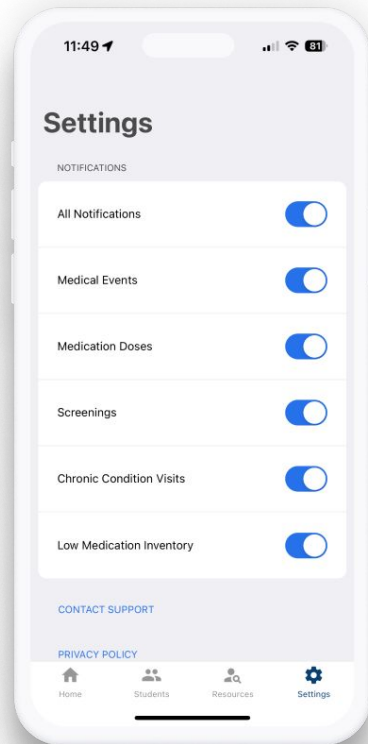

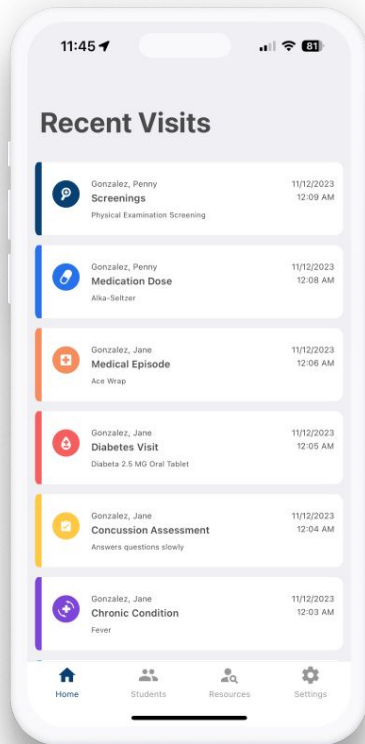

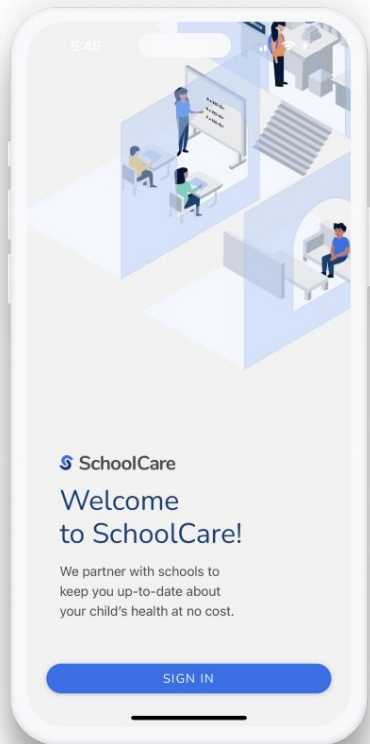

When a parent clicks on the push notification:

- The parent will be able to view any information that a nurse has logged for that visit.
- The parent will also see basic health information from their student's Health Record.
