

SCHOOLCARE'S PERSONAL HEALTH RECORD APP

What is the Personal Health Record App (PHR)?

SchoolCare's Personal Health Record app allows parents to access their children's health information from anywhere at any time. Parents will also receive nurse alerts (push notifications) when their child visits the school nurse's office.

What notifications and information can parents see?

Parents can view their student's basic health profile information, immunizations, and emergency contact information. Nurses have the option to send push notifications for specific visits and choose when parents are notified. We give districts the power to decide what is best to share and when they want to communicate directly with parents.

How do parents get the app?

Parents will need to have registered for a SchoolCare account in order to sign in to this app. Then they can download the app from the App Store or Google Play and sign in.

Does the app cost anything?

Our PHR app is free.

Is SchoolCare HIPAA and FERPA compliant? Do you share student data?

Our systems are both HIPAA and FERPA compliant. We never share identifiable information about any districts, schools, nurses, faculty, students, parents or administrators on the SchoolCare platform without their explicit permission.
